

C.I.Agent® Bilge Bag, Sock or Oil-Water Separator Skimmer

C.I.Agent® Bilge Bag

C.I.Agent® Sock or Oil-Water Separator Skimmer

PRODUCT DESCRIPTION:

The C.I.Agent® Bilge Bag is a device that is placed into the bilge of a vessel to capture and solidify hydrocarbons located in the bilge water. As the C.I.Agent® Bilge Bag floats and moves around the bilge compartment, the oil and fuel are captured and separated from the water. This process can be repeated until the bilge water is oil free.

C.I.Agent® Bilge Bags can be placed into the trash for easy disposal unlike polypropylene sheets, pillows, and booms that must be disposed of as special waste.* The C.I.Agent® Bilge Bag can keep bilges free of hydrocarbons and prevent citations and fines levied by the USCG during onboard inspections.

PRODUCT APPLICATIONS:

C.I.Agent® Bilge Bag is ideal for cleaning oily-water in both recreational and commercial vessels. It is an effective preventive maintenance tool to keep bilges free of oily-water. Other applications for this device include any container where oily-water is present such as oil-water separators, retention or containment structures, and utility vaults or manholes.

PERFORMANCE SPECIFICATIONS:

Solidification rate for the C.I.Agent® Bilge Bag is 1 to 8 by weight depending on the application.

BENEFITS:

- Will polish sheen.
- Will solidify gasoline, diesel, and all refined oils.
- Will not drip or leach out hydrocarbons; can be disposed of in most landfills eliminating the "Cradle to Grave Liability" and the fees associated with hazardous waste disposal.*
- Unlimited shelf-life.
- Not affected by heat or cold.

AVAILABILITY:

C.I.Agent® Bilge Bags are available by the case or as part of the C.I.Agent® Spill Response System. Sizes available are 6"x6", 12"x12", and 12"x36".

C.I.Agent® Sock or Oil-Water Separator Skimmers are available by the case or as part of the C.I.Agent® Spill Response System. Sizes available are 3"x12", 3"x20", 3"x24", and 3"x36".
